Alkaline Water Purifier

- Alkaline Water helps to flush acid waste from the body too much acidity in the body is the cause of many illnesses, chronic diseases, and premature aging.
- Alkaline Water has a pH value of about 9 to 10
- Bicarbonate (negative) picks up acid waste (positive) and carries it to organs for disposal
- Stomach Acid or Hydrochloric Acid (HCL) has a pH of about 3
- The high pH water neutralizes the low pH stomach acid
- As your body produces HCL it produces an equal amount of HCO_3 (bicarbonate) which goes into the bloodstream

Alkaline Water Purifier

Alkaline water is water with a higher pH level than regular drinking water (typically pH 8–9 vs. normal water at ~7). Supporters claim it offers several health benefits, but scientific evidence is still limited and mixed. Here's a breakdown:

May help with acid reflux: Alkaline water with a pH of 8.8 has been shown in some studies to inactivate pepsin, an enzyme responsible for reflux symptoms.

Might improve hydration: Some small studies suggest alkaline water could hydrate better after intense exercise, possibly due to faster absorption.

Bone health support: A few studies found alkaline water reduced bone resorption (loss of calcium from bones), but long-term effects are unclear.

Possible antioxidant effects: Ionized alkaline water may act as an antioxidant, helping neutralize free radicals, though more research is needed.
